

## **Business Analyst/Consultant - Salary Negotiable.**

### **Background**

Working for the growing UK operation of an international developer and distributor of highly specialised supply chain planning & optimisation software, you will be involved principally with business modelling projects, software implementation, pre and post sales support in the UK and northern Europe using both proprietary and 3<sup>rd</sup> party logistics modelling tools. In this role you will be trained to high levels of technical expertise on the proprietary supply chain planning software, which we develop, distribute and support.

You will be working closely with our customer base, which ranges from medium sized businesses to multinational corporations.

You will preferably have a graduate status in an engineering discipline, will be computer literate and conversant with MS Access, Excel, VBA or other programming languages.

You will have experience working in industry or logistics planning, especially inventory management, and have been involved in IT implementation projects. You will also have experience in business analysis and data modelling. You will be expected to travel.

### **Responsibilities**

Your responsibilities will include, but not limited, the following:

- Establishing client data specifications
- Analysis of client data sets
- Creation of DPM models
- Analysis and interpretation of model results
- Supporting the business with advice to fully utilise knowledge management technology
- Maintain and support internal network and data communications
- Design, implement and maintain internal website

### **Skills**

The preferred skill set to effectively fulfil this role is:

- Strong analytical skills
- Excellent communications skills
- Team player
- Advanced Access, VBA and Excel experience
- Business process mapping
- Proficient with report writing, PowerPoint and Word
