ToolsGroup Confidential - Internal Use Only - Not for Distribution

Our DNA

Optimizing supply chain performance through data science

Market Trends: What We're Hearing

Feedback from our customers and from the broader market

Decision Centric Planning:

The new knowledge worker needs to be empowered to collaborate and make decisions rapidly. Standard S&OP practi ces can't keep up with the speed of business today.

mainstream yet the need understanding the impact of decisions is higher than ever.

Buyers now expect to acquire best in class capabilities that

can be composed into a technology platform which provides differentiated business advantage.

SaaS and Cloud Native technologies have become the norm as are the need for lower total cost of ownership and business critical availability.

Product Vision, Industrial: Decision-Centric Planning Will Enable Our Vision

Decision-centric planning (a term coined by Gartner) is an approach to strategic and operational planning that prioritizes the quality and timeliness of decision-making. It places decision points at the core of the planning process, emphasizing the identification, evaluation, and selection of optimal courses of action.

Capabilities of Decision-Centric Planning

Product Vision, Retail.

Focusing on important macro-trends as we modernize our applications

Consumer preferences are constantly changing due to societal, technological, and lifestyle shifts. This leads to a continuous introduction of new products and variations.

> McKinsey: Understanding the ever-evolving, alwayssurprising consumer

The rise of **online shopping** has significantly impacted **brand loyalty.** About 75% of consumers have tried new shopping behaviors, with 36% trying new brands and 25% adopting new private labels.

> McKinsey: The great consumer shift: Ten charts that show how US shopping behavior is changing

The retail sector is experiencing **workforce shortages,** which also affect backoffice roles. This can lead to increased workloads for existing employees and **difficulties in maintaining efficient operations.**

> McKinsey : How retailers can attract and retain frontline talent amid the Great Attrition

Retail supply chains contribute to 25% of global greenhouse gas emissions, highlighting the need for **sustainable practices.**

Retailers are increasingly embedding sustainability into their operations to **meet consumer demands** and regulatory requirements.

Clear market differentiation enabled by our acquisitions and our technology investments

ToolsGroup's Next Generation AI Platform

Technical Architecture Vision

Introducing the Evolved ToolsGroup Technology Platform

Key Design Considerations

Composable Modular Service Oriented Architecture

Reusing key capabilities across applications and allowing customers to compose into their own tech stack

Use of cloud-bound technologies

To achieve hyperscale real-time insights and high availability

Real-time data ingestion, industry connectors and modern APIs

Minimizing onboarding complexity and costs and optimizing time to value and customers ROI

Low-Code / No-Code Configurability and Industry Standard Extensibility

Reducing Implementation cost and complexity while catering to specific needs of customers.

\checkmark

Built on a modern cloud-based architecture

New platform as a strategic differentiator and innovation accelerator

- Providing a **unified User Experience** across a broad set of applications and capabilities.
- **Modularity** helps compose solutions tailored to unique customer needs, can be easily combined with existing tech investment
- Unified layers reduce complexity and allow for easier introduction of new features into the suite.
- **Common configuration framework** and APIs reduces implementation complexity and costs
- **Cloud Bound** Technologies for greater availability, resilience and seamless upgrades

Taking a Modular Approach Allows for Plug-and-Play

Using building blocks to rapidly innovate and seamlessly connect with other applications

W Embedded Business Intelligence to Unify User Experience and Enhance Reporting and Analytics Across All Products

First embedded dashboards already available in Decision Hub

- Modern, cloud-native technology ensures a scalable and easy-to-use solution for flexible data exploration
- Fully embedded within Enhance and Evolve products to deliver a seamless user experience
- Standard dashboards and reports
- Self-service analytics will enable users to create and share their own rich dashboards and reports
- Opportunity to integrate data and reporting across apps incl. 3rd party

SO99+ Copilot Azure OpenAl Services

Francesco S... ServiceOptimizer99+ ≡ • Which are the 10 best seller items (any aggregation level) for 2022 (any time slot)? show results in a tabular view. The information about the best seller items can be found in the table TTERHIST which is intended as Monthly Demand by Sales Area. The field TTERH is intended as Item Code and the field QUANTITY is intended as Quantity. The field YEAR is intended as Year. To find the top 10 best seller items for 2022, we would need to aggregate the OUANTITY field for each ITEM for the year 2022 and then sort in descending order to get the top 10.

SO99+ Copilot

ITEM	TOTAL_QUANTITY	
The top 10 b	est seller items for 2022	are:
Now let's exe	ecute the query 🤓	

	ITEM_1	5000	
	ITEM_2	4500	
k me	anything!		

- The new SO99+ copilot is also able to help the user to explore the data stored into a SO99+ data base.
- The user can write a questions asking information about some data stored
- The system will first perform a translation of the questions into information that will be useful for the system to build the query: tables and fields names and descriptions, calculations rules, and so on. Also, this preprocessor has been designed on a generative AI system.
- The generated information are then combined with the original questions to create a final input for the system who will build the query on the DB.
- The guery is automatically performed, and the results can be shown in a prosaic way or in a table is specified in the question.

Grounding Data

- User guides and materials sourced from ToolsGroup Academy.
- Comprehensive coverage spanning from fundamental functionalities to advanced features.

Key Features

- Proficient support system offering insightful responses and solutions to supply chain challenges.
- Ability to provide accurate responses to questions extracted directly from SO99+ certification tests.

Results

- Precise guidance on inventory management, demand forecasting, and replenishment processes.
- Enhances efficiency and accuracy in supply chain operations.
- Accessible support for professionals navigating SO99+ complexities.

No More S&OP Meetings

As a supply chain executive, I want to enable a continuous, collaborative decision-making process that involves the right stakeholders at the right time, with the right information, to *make better decisions, faster*. I want to move to a guided, asynchronous workflow that empowers cross-functional teams to react earlier to changes and trends affecting the balancing of supply and demand, quickly evaluate options to mitigate risks and **exploit opportunities**, and align most profitable actions to take. All this should be possible on an ongoing day-today basis, taking decisions as early as possible, rather than waiting for a fixed cadence of monthly meetings.

Decision Hub has Been Developed in ToolsGroup's New Unified Experience Layer

Decision Hub

The platform for decision centric planning

For supply chain executives facing increasing supply chain uncertainty, overly rigid and piecemeal decisionmaking processes informed by latent and misaligned data mean that understanding impacts and reacting to changes takes too long. Decision Hub enables continuous, collaborative decision-making guided by asynchronous workflows to quickly evaluate options and align on the best possible actions to take.

Key Capabilities:

- Virtual situation room where all critical stakeholders can asynchronously collaborate on emerging supply chain threats and opportunities
- In-app real-time scenario planning to generate demand forecast scenarios and compute corresponding supply impact using the latest data and forecasts
- Scenario Analyzer tool to **compare and analyze results to quickly understand the impact** of potential outcomes

- Guided workflows that help users take actions to move through the decision-making process more efficiently
- Notifications and alerts to actions taken in your open situations so **no time is wasted** in responding

Faster tactical decisions and more comprehensive

strategic plans that mitigate threats and exploit
 opportunities to increase profitability

Decision Hub Complements SO99+ to Support More Tactical and Strategic Decision-Making

Key questions answered:

- How do demand risks and opportunities affect supply requirements and inventory projections?
- Where and when would there be capacity constraints?
- What are the potential impacts of any constraints?

Types of decisions supported:

- Commit to demand generation activities to close gaps to financial plans based on feasible supply
- Proactively align capacity with potential demand risks or opportunities
- Proactively implement alternative sourcing strategies
- Adjust inventory policies to meet working capital targets based on range of possible demand outcomes

Proven engines and workflows from existing tools composed in a revolutionary new application

- Proven engines for probabilistic forecasting, stock to service curve calculations, and wholesale replenishment from SO99+
- Proven AI engines for allocation, replenishment, and rebalancing from Evo
- Best practice workflows and advanced forecasting from JustEnough
- Unified user experience and common data layer

Inventory.io resonating with analysts

<u>V</u>

Smart Price Optimization with Evo and SO99+

Distributors face endless uncertainty: shrinking margins, growing e-comm competition, supplier unreliability, long tail, and intermittent demand. **ToolsGroup AI solutions** account for uncertainty with real-time price adjustments to each SKU on each price list in response to the smallest demand signals to maximize profit

\checkmark

Generating Critical Extra Data for More Accurate Forecasts

Because PriceAI is designed around explainable AI, the price elasticities and attributes are not just used in the optimization. They are output that you can visualize in the Elasticity app—or export directly into SO99+.

\checkmark

PriceAl Works with SO99+ to Optimize Overall Impact

SO99+ takes these elasticities and layers them into the forecast to align the demand to the new price lists for every SKU/location for the relevant time period and then automatically readjusts its multiechelon inventory optimization to deliver service level, revenue and margin goals within the constraints
